PT Detecting and differentiating between colon cell proliferative disorders
PT associated with a gene or its regulatory regions comprises contacting a
PT target nucleic acid in a biological sample obtained from the subject with
PT a reagent.
XX
PS Claim 32; SEQ ID NO 302; 74pp; English.
XX
CC The invention relates to a novel method for detecting and differentiating
CC between colon cell proliferative disorders associated with at least one
CC gene or its regulatory regions. The method comprises contacting a target
CC nucleic acid in a biological sample obtained from the subject with at
CC least one reagent or a series of reagents, where the reagent or series of
CC reagents, distinguishes between methylated and non methylated CpG
CC dinucleotides within the target nucleic acid. The molecules of the
CC invention demonstrate cytostatic activity whilst the method may useful
CC for detecting and differentiating between colon cell proliferative
CC disorders, including cancers such as colon adenoma and colon carcinoma.
CC The PNA (peptide nucleic acid)-oligomers are useful as probes for
CC determining cytosine methylation state or single nucleotide
CC polymorphisms. The current sequence is that of the pretreated genomic DNA
CC region of the invention. This sequence is not shown within the
CC specification but is taken from Wipoweb.

PT   New nucleic acid comprising a sequence of at least 18 bases in length of
PT   a segment of the chemically pretreated genomic DNA, useful for treating
PT   colon cell proliferative disorders.
XX
PS   Claim 1; SEQ ID NO 19; 147pp; English.
XX
CC   The present invention describes a nucleic acid (I) comprising a sequence
CC   of at least 18 bases in length of a segment of the chemically pretreated
CC   genomic DNA of any of the 5 sequences of 965, 16579, 3000, 1984, or 7833
CC   bp, which represent human versican, TPEF, H-cadherin, calcitonin and EYA4
CC   respectively (see ADE37755 to ADE37759), or its complement. Also
CC   described: (1) an oligomer, in particular an oligonucleotide or peptide
CC   nucleic acid (PNA)-oligomer comprising in each case of at least one base
CC   sequence having a length of at least 9 nucleotides which is complementary
CC   to, or hybridises under moderately stringent or stringent conditions to a
CC   pretreated genomic DNA; (2) a set of oligomers comprising at least two of
CC   the oligomer of (1); (3) manufacturing an arrangement of different
CC   oligomers (array) fixed to a carrier material; (4) an array of different
CC   oligonucleotide- and/or PNA-oligomer sequences, which are arranged on a
CC   plane solid phase in the form of a rectangular or hexagonal lattice; (5)
CC   a composition of matter comprising the nucleic acid and a buffer
CC   comprising 1-5 mM magnesium chloride, 100-500 micromole dNTP, 0.5-5 units
CC   of taq polymerase, and the oligomer; (6) detecting, differentiating or
CC   distinguishing between colon cell proliferative disorders; and (7)
CC   detecting a colon cell proliferative disorder. (I) has cytostatic
CC   activity, and can be used in gene therapy. The versican, TPEF, H-
CC   cadherin, calcitonin and EYA4 genes, and the polypeptides expressed by
CC   them, can be used for detecting, differentiating or distinguishing
CC   between colon cell proliferative disorders. The oligomers are useful for
CC   detecting the cytosine methylation state and/or single nucleotide
CC   polymorphisms (SNPs) within nucleic acid sequences. The array is useful
CC   for analysing diseases associated with the methylation state of the CpG
CC   dinucleotides. The present sequence is used in the exemplification of the
CC   present invention.

PT   Predicting responsiveness of a subject with breast cell proliferative
PT   disorder, useful for treating or differentiating breast cell
PT   proliferative disorders comprises analyzing methylation pattern of a
PT   genomic DNA from the subject.
XX
PS   Disclosure; SEQ ID NO 290; 104pp; English.
XX
CC   The invention relates to a novel method for predicting the responsiveness
CC   of a subject with a cell proliferative disorder of the breast tissues to
CC   a therapy comprising analysing the methylation pattern of a target
CC   nucleic acid by contacting at least one of the target nucleic acids in a
CC   biological sample obtained from the subject prior to or during treatment.
CC   The method of the invention has cytostatic activity, and may have a use
CC   in gene therapy. The set of oligonucleotides comprising at least two of
CC   the oligomers are useful for detecting the cytosine methylation state
CC   and/or single nucleotide polymorphisms (SNPs) within the sequences. The
CC   methods, nucleic acid, oligonucleotide, and kit are useful for the
CC   treatment, characterisation, classification and/or differentiation, of
CC   breast cell proliferative disorders. The method is also useful for
CC   predicting the responsiveness of a subject with a cell proliferative
CC   disorder of the breast tissues to a therapy. The present sequence is used
CC   in the exemplification of the invention.

PT   Predicting responsiveness of a subject with breast cell proliferative
PT   disorder, useful for treating or differentiating breast cell
PT   proliferative disorders comprises analyzing methylation pattern of a
PT   genomic DNA from the subject.
XX
PS   Disclosure; SEQ ID NO 564; 104pp; English.
XX
CC   The invention relates to a novel method for predicting the responsiveness
CC   of a subject with a cell proliferative disorder of the breast tissues to
CC   a therapy comprising analysing the methylation pattern of a target
CC   nucleic acid by contacting at least one of the target nucleic acids in a
CC   biological sample obtained from the subject prior to or during treatment.
CC   The method of the invention has cytostatic activity, and may have a use
CC   in gene therapy. The set of oligonucleotides comprising at least two of
CC   the oligomers are useful for detecting the cytosine methylation state
CC   and/or single nucleotide polymorphisms (SNPs) within the sequences. The
CC   methods, nucleic acid, oligonucleotide, and kit are useful for the
CC   treatment, characterisation, classification and/or differentiation, of
CC   breast cell proliferative disorders. The method is also useful for
CC   predicting the responsiveness of a subject with a cell proliferative
CC   disorder of the breast tissues to a therapy. The present sequence is used
CC   in the exemplification of the invention.

PT Fragments of chemically modified genes associated with tumor suppressor
PT genes and oncogenes, useful in designing primers and probes for analyzing
PT diseases associated with cytosine methylation state e.g. cancer.
XX
PS Claim 1; SEQ ID NO 36; 27pp; English.
XX
CC The invention relates to a nucleic acid comprising a sequence of 18
CC bases, of a segment of chemically pretreated DNA (CP DNA) e.g. with
CC bisulphite, of genes associated with tumour suppression and oncogenes
CC having a sequence taken from 536 (actually 533 since numbers 408, 458 and
CC 500 are missing from the sequence listing) sequences (Ss) and sequences
CC complementary to (Ss). The nucleic acid may be a peptide nucleic acid-
CC oligomer (PNA) of at least 9 nucleotides and may form part of a set of
CC probes for detecting the cytosine methylation state and/or single
CC nucleotide polymorphisms and also to be used in an array for analysing
CC diseases associated with CpG dinucleotides e.g. cancers and tumours. The
CC probes can also be used in a method for ascertaining genetic and/or
CC epigenetic parameters for the diagnosis and/or therapy of existing
CC diseases or the predisposition to specific diseases, by analysing
CC cytosine methylations. The parameters may be compared to another set of
CC genetic and/or epigenetic parameters, the differences serving as basis
CC for diagnosis and/or prognosis events which are disadvantageous to
CC patients. The present sequence is one of the 533 genomic sequences
CC derived from tumour suppressor genes and oncogenes. Sequences with even
CC numbered Seq ID numbers are the complementary sequence of the
CC corresponding odd numbered sequence (e.g. ID 2 and ID1, ID 536 and ID
CC 535, except for those whose partner sequence is missing). Note: The
CC sequence data for this patent did not form part of the printed
CC specification, but was obtained in electronic format directly from WIPO
CC at ftp.wipo.int/pub/published_pct_sequences

PT   Novel nucleic acid useful for diagnosis and therapy of behavioral
PT   disorder, neurological disorder and cancer, comprises a sequence of a
PT   segment of chemically pretreated DNA of adrenergic alpha-1C-receptor
PT   gene.
XX
PS   Claim 1; Page 114-122; 190pp; English.
XX
CC   The invention relates to nucleic acids comprising a segment of chemically
CC   pretreated DNA of adrenergic alpha-1C-receptor gene. The invention also
CC   relates to oligonucleotides or peptide nucleic acid (PNA) oligomers
CC   useful for detecting cytosine methylations. The pretreated DNA is useful
CC   for the diagnosis or therapy of behavioural disorders, neurological
CC   disorders and cancer, in particular major depressive disorder, Tourette's
CC   syndrome, schizophrenia, psychiatric and neurological disorders, smoking,
CC   drug abuse, alcoholism, personality traits, compulsive gambling, human
CC   immunodeficiency virus dementia, migraine, behaviours in schizophrenic
CC   and schizoaffective patients, and suicidal behaviour in patients with
CC   schizophrenia. The nucleic acid is useful for detecting the methylation
CC   state of all CpG dinucleotides and/or single nucleotide polymorphisms
CC   (SNPs). The present sequence is human chemically treated genomic DNA

PT   New stress-responsive nucleic acid, useful for altering the
PT   responsiveness of a plant, e.g. cereal, to an abiotic stress such as cold
PT   stress, salt stress or osmotic stress.
XX
PS   Claim 48; SEQ ID NO 15671; 89pp; English.
XX
CC   The invention relates to novel abiotic stress responsive polynucleotides
CC   and polypeptides. Also disclosed are vectors, expression cassettes, host
CC   cells, and plants containing such polynucleotides. Also disclosed are
CC   methods for using the polynucleotides and polypeptides to alter the
CC   responsiveness of a plant to abiotic stress. The invention is useful in
CC   agriculture. The nucleic acid is useful for determining whether a test
CC   plant has been exposed to an abiotic stress condition. It is also useful
CC   for selecting an agent that alters abiotic stress regulated
CC   polynucleotide expression in a plant cell, and to identify a homolog or
CC   ortholog to an abiotic stress responsive polynucleotide. The nucleic acid
CC   molecule and the polypeptide encoded by it are useful in altering the
CC   responsiveness of a plant to an abiotic stress, such as cold stress, salt
CC   stress, osmotic stress or any of their combinations. The present sequence
CC   is used in the exemplification of the invention

PT   Oligonucleotide for diagnosis and therapy of diseases associated with
PT   signal transduction e.g. cancer, comprises chemically modified genomic
PT   sequences of genes associated with signal transduction.
XX
PS   Claim 1; SEQ ID NO 142; 24pp; English.
XX
CC   The present invention relates to chemically modified DNA sequences of
CC   signal transduction associated genes. The DNA sequences are chemically
CC   modified using a solution of bisulphite, hydrogen sulphite or disulphite.
CC   Also disclosed are oligonucleotides and/or PNA oligomers for detecting
CC   the cytosine methylation state (CpG islands) of these genes, and a method
CC   for the diagnosis and/or therapy of genetic and epigenetic parameters of
CC   genes associated with signal transduction. The genomic DNA can be
CC   obtained from cells or cellular components which contain DNA, e.g. cell
CC   lines, biopsies, blood, sputum, stool, urine, cerebral-spinal fluid,
CC   tissue embedded in paraffin such as tissue from eyes, intestine, kidney,
```

CC brain, heart, prostate, lung, breast or liver, histologic object slides,
CC and all their possible combinations. The sequences of the invention are
CC useful for the diagnosis and therapy of diseases associated with signal
CC transduction e.g. solid tumours and cancer. ABK31158-ABK31545 represent
CC chemically pretreated genomic DNA sequences of different genes associated
CC with signal transduction, or their complementary sequences. Note: The
CC sequence data for this patent did not form part of the printed
CC specification, but was obtained in electronic format directly from the
CC European Patent Office

COMMENT Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; cn bw sp, the same strain used for the BDGP's P1 and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

COMMENT     Determination of this BAC-end sequence was carried out as part of a
            collaboration with the Berkeley Drosophila Genome Project (BDGP).
            The BDGP is constructing a physical map of the Drosophila
            melanogaster genome using these BACs. For further information
            please see  http://www.fruitfly.org The BDGP Drosophila
            melanogaster BAC library was prepared by Kazutoyo Osoegawa and
            Aaron Mammoser in Pieter de Jong's laboratory in the Department of
            Cancer Genetics at the Roswell Park Cancer Institute in Buffalo,
            NY. The library is named RPCI-98 and was constructed by partial
            EcoRI digestion of Drosophila DNA provided by the BDGP from the
            isogenic strain y2; cn bw sp, the same strain used for the BDGP's
            P1 and EST libraries. A more detailed description of the library
            and how to order individual BAC clones, the entire library, or
            filters for hybridization from the BACPAC Resource Center can be
            found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

  JOURNAL   Submitted (23-JUL-1999) Genoscope - Centre National de Sequencage :
            BP 191 91006 EVRY cedex - FRANCE (E-mail : seqref@genoscope.cns.fr
            - Web : www.genoscope.cns.fr)
COMMENT     Determination of this BAC-end sequence was carried out as part of a
            collaboration with the European Drosophila Genome Project (EDGP) -
            http://www.edgp.ebi.ac.uk -. This Drosophila melanogaster BAC
            library (Dros BAC) was made by Alain Billaud at CEPH (Centre
            d'Etude du Polymorphisme Humain) with funding provided by a MRC
            project grant. The DNA was prepared from embryos by Alain Bucheton
            and Genevieve Payan. It has been constructed in the vector
            pBeloBAC11.

COMMENT This GSS is part of a random genomic sequencing program of thirteen yeast species: Saccharomyces bayanus var. uvarum, Saccharomyces exiguus, Saccharomyces servazzii, Zygosaccharomyces rouxii, Saccharomyces kluyveri, Kluyveromyces thermotolerans, Kluyveromyces lactis var. lactis, Kluyveromyces marxianus var. marxianus, Pichia angusta, Debaryomyces hansenii var. hansenii, Pichia sorbitophila, Candida tropicalis and Yarrowia lipolytica. Genomic inserts of 3 to 5 kb were prepared and both extremities were sequenced. See keywords for description of this sequence and for the sequence of the other extremity of this insert.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

TITLE Complete genome sequence of Salmonella enterica serovar Typhimurium LT2
JOURNAL Nature 413 (6858), 852-856 (2001)
PUBMED 11677609
REFERENCE 2 (bases 1 to 22043)
AUTHORS .
CONSRTM The Salmonella typhimurium Genome Sequencing Project
TITLE Direct Submission
JOURNAL Submitted (29-MAR-2001) Genome Sequencing Center, Department of Genetics, Washington University School of Medicine, 4444 Forest Park Boulevard, St. Louis, MO 63108, USA
COMMENT Supported by NIH grant 5U 01 AI43283

Coding sequences below are predicted from manually evaluated computer analysis, using similarity information and the programs; GLIMMER; http://www.tigr.org/softlab/glimmer/glimmer.html and GeneMark; http://opal.biology.gatech.edu/GeneMark/

EC numbers were kindly provided by Junko Yabuzaki and the Kyoto Encyclopedia of Genes and Genomes; http://www.genome.ad.jp/kegg/, and Pedro Romero and Peter Karp at EcoCyc; http://ecocyc.PangeaSystems.com/ecocyc/

The analyses of ribosome binding sites and promoter binding sites were kindly provided by Heladia Salgado, Julio Collado-Vides and ReguonDB;
http://kinich.cifn.unam.mx:8850/db/regulondb_intro.frameset

This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistries or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one m13 subclone.

  TITLE     Direct Submission
  JOURNAL   Submitted (21-FEB-2004) Genome Analysis, Institute of Molecular
            Biotechnology, Beutenberstr. 11, Jena 07745, Germany
COMMENT     On Feb 21, 2004 this sequence version replaced gi:28828137.
            CDS predictions from GeneID do not necessarily reflect true genes.
            Further Information is available from IMB Jena, Department of
            Genome Analysis

COMMENT     On Jul 17, 2001 this sequence version replaced gi:14578078.
            INFORMATION: http://www.hgsc.bcm.tmc.edu/ or email
            gc-help@bcm.tmc.edu

            CLONE LENGTH: This sequence does not necessarily represent the
            entire insert of this clone. Overlapping regions of clones are only
            sequenced and submitted once, so the sequence for the remainder of
            the insert may be found in the record for the adjacent clones.
            Overlapping clones are noted at the beginning and end of the
            Features listing.

            ANNOTATION OF FEATURES:
               STSs are identified using ePCR (Genome Res. 7:541-550) searches
            of a local database that includes entries from dbSTS, GDB, and
            local mapping efforts.
               Repeats are identified using RepeatMasker (A. Smit and P. Green,
            unpublished.) for Human and Mouse sequences.
               Genes and Region of sequence similarity are identified by BLAST
            (Nuc. Acids Res. 25:3389-3402) similarity (expect < 1e-34) to the
            EST and cDNA sequences. Genes demonstrate at least two exons
            flanked by consensus splice sites that maintained sequence
            continuity across the splice junctions. Sequences that are not
            identical matches are annotated as similar.

            SEQUENCING READ COVERAGE:Sequencing is completed to a minimum
            standard of double strand coverage with a minimum of 2 clones and 2
            reads with no ambiguities or 2 chemistries with a minimum of 2
            clones and 3 reads with no ambiguities. If the sequence quality for
            a region does not meet this standard, it will be indicated in the
            annotation as Low Coverage.

            QUALITY OF INDIVIDUAL BASES:This sequence meets stringent quality
            standards - estimated error rate less than 1 per 10,000 bases.
            Reports of lowest quality individual bases and measures of base
            quality are listed below. Description of the metrics can be found
            at URL:
            http://gc.bcm.tmc.edu:8088/quality.info/genbank.annotation.html.

  TITLE     Direct Submission
  JOURNAL   Submitted (09-NOV-2002) Human Genome Sequencing Center, Department
            of Molecular and Human Genetics, Baylor College of Medicine, One
            Baylor Plaza, Houston, TX 77030, USA
COMMENT     On Nov 9, 2002 this sequence version replaced gi:23096537.
            The sequence in this assembly is a combination of BAC based reads
            and whole genome shotgun sequencing reads assembled using Atlas
            (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
            in the feature table below represents a scaffold in the Atlas
            assembly (a 'contig-scaffold'). Within each contig-scaffold,
            individual sequence contigs are ordered and oriented, and separated
            by sized gaps filled with Ns to the estimated size. The sequence
```

```
          may extend beyond the ends of the clone and there may be sequence
          contigs within a contig-scaffold that consist entirely of whole
          genome shotgun sequence reads. Both end sequences and whole genome
          shotgun sequence only contigs will be indicated in the feature
          table.
          -------------- Genome Center
              Center: Baylor College of Medicine
              Center code: BCM
              Web site: http://www.hgsc.bcm.tmc.edu/
              Contact: hgsc-help@bcm.tmc.edu
          -------------- Project Information
              Center project name: GDDV
              Center clone name: CH230-9H22
          -------------- Summary Statistics
              Assembly program: Phrap; version 0.990329
              Consensus quality: 162619 bases at least Q40
              Consensus quality: 164392 bases at least Q30
              Consensus quality: 165269 bases at least Q20
              Estimated insert size: 169231; sum-of-contigs estimation
              Quality coverage: 6x in Q20 bases; sum-of-contigs estimation
          --------------
          * NOTE: Estimated insert size may differ from sequence length
          *   (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
          * NOTE: This is a 'working draft' sequence. It currently
          * consists of 4 contigs. The true order of the pieces
          * is not known and their order in this sequence record is
          * arbitrary. Gaps between the contigs are represented as
          * runs of N, but the exact sizes of the gaps are unknown.
          * This record will be updated with the finished sequence
          * as soon as it is available and the accession number will
          * be preserved.
          *         1   109158: contig of 109158 bp in length
          *    109159   109258: gap of unknown length
          *    109259   110280: contig of 1022 bp in length
          *    110281   110380: gap of unknown length
          *    110381   111540: contig of 1160 bp in length
          *    111541   111640: gap of unknown length
          *    111641   170627: contig of 58987 bp in length.

PT   Nucleic acid molecules specific for bacterial polysaccharide antigens -
PT   useful for detecting specific strains in, e.g. food, faeces or patient
PT   samples.
XX
PS   Claim 9; Fig 10; 165pp; English.
XX
CC   This is the nucleotide sequence of a gene cluster involved in the
CC   biosynthesis of the Salmonella enterica serotype B (strain LT2) O
CC   antigen. 16 Open reading frames within the gene cluster were identified
CC   on the basis of homology to known sequences. The genes encode proteins
CC   (see AAW88335-50) involved the synthesis of sugars present in the
CC   polysaccharide antigen, and in the transport or processing of
CC   polysaccharide or oligosaccharide units. The use of nucleic acid
CC   molecules derived from assembly and transport genes, particularly wbd
CC   (transferase), wzx (flippase) and wzy (polymerase) genes, within O
CC   antigen gene clusters improves the specificity of methods for the
CC   detection and identification of O antigens, e.g. in testing food- or
CC   faecal-derived samples, or samples from patients. The O antigen is a
CC   major virulence factor of S. enterica

PT Nucleotide peculiar to O-antigen of Escherichia coli O43.
XX
PS Claim 1; SEQ ID NO 1; 35pp; Chinese.
XX
CC The invention relates to a nucleotide sequence (SEQ ID No:1) which is
CC specific to the O-antigen of Escherichia coli O43. The nucleotide
CC sequence represents the complete sequence (14309bp) of a gene cluster for
CC controlling the synthesis of O-antigen in Escherichia coli O43. The
CC nucleotide sequence can have one or several inserted, deleted or
CC substituted bases, whilst still retaining its function. Also described is
CC a PCR primer for the glycosyltransferase (galF) gene and a PCR primer for
CC the oligosaccharide unit treatment (gnd) gene, both of which are
CC contained within the E. coli type O43 O-antigen gene cluster. The
CC invention also discloses a method for detecting and identifying E. coli
CC type O43 in humans. This sequence represents the E. coli type O43 O-
CC antigen gene cluster of the invention.

XX
CC The present invention provides a number of human immune system associated
CC genes which are modified by the methylation of cytosines. The sequences
CC can be used in the diagnosis and treatment of immune system disorders,
CC including eye diseases such as retinopathy, neovascular glaucoma and
CC macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid
CC leukaemia, Alzheimer's disease, AIDS, epilepsy, neurofibromatosis,
CC rheumatoid arthritis, psoriasis and inflammatory/ulcerative bowel
CC diseases. The present sequence is a gene of the invention

PT   New antisense compound targeted to a nucleic acid molecule encoding
PT   phosphotyrosyl phosphatase activator, for modulating expression of
PT   phosphotyrosyl phosphatase activator or treating hyperproliferative
PT   disorders.
XX
PS   Example 15; SEQ ID NO 11; 131pp; English.
XX
CC   The invention relates to a compound 8-80 nucleobases in length targeted
CC   to a nucleic acid molecule encoding phosphotyrosyl phosphatase activator
CC   (PTPA), that specifically hybridises with the nucleic acid molecule
CC   encoding phosphotyrosyl phosphatase activator and inhibits the expression
CC   of phosphotyrosyl phosphatase activator, i.e. ana antisense
CC   oligonucleotide. Also included are a composition comprising the compound
CC   and a pharmaceutical carrier or diluent, a method of inhibiting the
CC   expression of phosphotyrosyl phosphatase activator in cells or tissues, a
CC   method of treating an animal having a disease or condition associated
CC   with phosphotyrosyl phosphatase activator and a method of screening for
CC   an antisense compound. The disease or condition is a hyperproliferative
CC   disorder or developmental disorder. The compound, particularly the
CC   antisense oligonucleotide is useful in modulating the function of nucleic
CC   acid molecules encoding phosphotyrosyl phosphatase activator. The
CC   antisense compound can also be used as research tools and diagnostics. It
CC   can also be used as tools in differential and/or combinatorial analyses
CC   to elucidate expression patterns of a portion or the entire complement of
CC   genes expressed within cells and tissues. The compound can also be used
CC   for treating diseases or conditions associated with phosphotyrosyl
CC   phosphatase activator, preferably hyperproliferative disorder or
CC   developmental disorder. The compound can also be used as prophylaxis,
CC   e.g. to prevent or delay infection, inflammation or tumour formation. The
CC   present sequence is the human PTPA gene which is a target for the
CC   antisense oligonucleotides of the invention.

PS Claim 4; SEQ ID NO 26; 282pp; English.
XX
CC The invention relates to a purified and isolated DNA sequence having
CC protein production increasing activity comprising at least one bent DNA

```
CC   element, and at least one binding site for a DNA binding protein. The
CC   purified and isolated DNA sequence comprising a first and a second
CC   isolated matrix attachment region (MAR) nucleotide sequence, which is a
CC   MAR nucleotide sequence selected from a purified and isolated DNA
CC   sequence above, a purified and isolated MAR DNA above, a purified and
CC   isolated cLysMAR element and/or fragment, a synthetic MAR sequence, a
CC   sequence complementary to it, its molecular chimera, or its combinations
CC   and variants, is useful for increasing protein production activity in a
CC   eukaryotic host cell. The present sequence represents a human matrix
CC   attachment region DNA.

PT Fragments of chemically modified genes associated with tumor suppressor
PT genes and oncogenes, useful in designing primers and probes for analyzing
PT diseases associated with cytosine methylation state e.g. cancer.
XX
PS Claim 1; SEQ ID NO 514; 27pp; English.
XX
CC The invention relates to a nucleic acid comprising a sequence of 18
CC bases, of a segment of chemically pretreated DNA (CP DNA) e.g. with
CC bisulphite, of genes associated with tumour suppression and oncogenes
CC having a sequence taken from 536 (actually 533 since numbers 408, 458 and
CC 500 are missing from the sequence listing) sequences (Ss) and sequences
CC complementary to (Ss). The nucleic acid may be a peptide nucleic acid-
CC oligomer (PNA) of at least 9 nucleotides and may form part of a set of
CC probes for detecting the cytosine methylation state and/or single
CC nucleotide polymorphisms and also to be used in an array for analysing
CC diseases associated with CpG dinucleotides e.g. cancers and tumours. The
CC probes can also be used in a method for ascertaining genetic and/or
CC epigenetic parameters for the diagnosis and/or therapy of existing
CC diseases or the predisposition to specific diseases, by analysing
CC cytosine methylations. The parameters may be compared to another set of
CC genetic and/or epigenetic parameters, the differences serving as basis
CC for diagnosis and/or prognosis events which are disadvantageous to
CC patients. The present sequence is one of the 533 genomic sequences
CC derived from tumour suppressor genes and oncogenes. Sequences with even
CC numbered Seq ID numbers are the complementary sequence of the
CC corresponding odd numbered sequence (e.g. ID 2 and ID1, ID 536 and ID
CC 535, except for those whose partner sequence is missing). Note: The
CC sequence data for this patent did not form part of the printed
CC specification, but was obtained in electronic format directly from WIPO
CC at ftp.wipo.int/pub/published_pct_sequences

PT New purified and isolated DNA sequence having protein production
PT increasing activity comprises a bent DNA element and a binding site for a
PT DNA binding protein, useful for increasing protein production activity in
PT eukaryotic host cell.
XX
PS Disclosure; SEQ ID NO 53; 282pp; English.
XX
CC The invention relates to a purified and isolated DNA sequence having
CC protein production increasing activity comprising at least one bent DNA
CC element, and at least one binding site for a DNA binding protein. The
CC purified and isolated DNA sequence comprising a first and a second
CC isolated matrix attachment region (MAR) nucleotide sequence, which is a
CC MAR nucleotide sequence selected from a purified and isolated DNA
CC sequence above, a purified and isolated MAR DNA above, a purified and
CC isolated cLysMAR element and/or fragment, a synthetic MAR sequence, a
CC sequence complementary to it, its molecular chimera, or its combinations
CC and variants, is useful for increasing protein production activity in a
CC eukaryotic host cell. The present sequence represents a human chromosome
CC 1 contig DNA.

PT   Reagents for diagnosis, study and therapy of chronic inflammatory joint
PT   and other diseases, comprises any of many specified genes or derived
PT   proteins.
XX
PS   Claim 1; Page; 12pp; German.
XX
CC   This invention describes a novel reagent for diagnosis, molecular
CC   definition and therapy of chronic inflammatory joint diseases, and other
CC   inflammatory disorders, infective or tumour diseases in humans. The
CC   products of the invention have antiinflammatory, cytostatic,
CC   antiarthritic, antirheumatic and immunosuppressive activity and can be
CC   used for gene therapy. The reagent of the invention and any proteins and
CC   antibodies derived from it, are used (i) for analysing tissue and blood
CC   samples for medical diagnosis; (ii) for diagnosis and characterisation of
CC   chronic joint diseases, on the basis of molecular characterisation, and
CC   determining the etiological pathogenicity principle of as yet
CC   uncharacterised inflammatory diseases, also monitoring progression and/or
CC   treatment of disease, and optimisation of therapy and (iii) for
CC   developing treatments for inflammatory diseases, particularly of joints,
CC   infections and tumours. ACA64801-ACA64965 represent human polynucleotides
CC   used in the method of the invention

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

COMMENT Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; cn bw sp, the same strain used for the BDGP's P1 and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

RESULT 1
SERFBB
LOCUS SERFBB 22080 bp DNA linear BCT 14-JUN-2005
DEFINITION S.enterica (group B) rfb gene cluster.
ACCESSION X56793 M29713
VERSION X56793.1 GI:47885
KEYWORDS abe gene; CDP-abequose synthase; CDP-glucose 4.6-dehydratase; ddhA gene; ddhB gene; ddhC gene; ddhD gene; dTDP-6-deoxy-L-mannose dehydrogenase; dTDP-dehydrorhamnose reductase; dTDP-glucose oxidoreductase; dTDP-glucose-4.6-dehydratase; galF gene; glucose-1-P cytidyltransferase; glucose-1-P thymidydyltransferase; manB gene; manC gene; Manose-1-Pguanylyltransferase; oxidoreductase; Phosphomanomutase; rfb gene cluster; rmlA gene; rmlB gene; rmlC gene; rmlD gene; undecaprenyl-P galactose-P transferase; wbaN gene; wbaP gene; wbaU gene; wbaV gene; wcaL gene; wzx gene.
SOURCE Salmonella enterica
ORGANISM Salmonella enterica
Bacteria; Proteobacteria; Gammaproteobacteria; Enterobacteriales; Enterobacteriaceae; Salmonella.
REFERENCE 1 (bases 1 to 22080)
AUTHORS Wyk,P. and Reeves,P.
TITLE Identification and sequence of the gene for abequose synthase, which confers antigenic specificity on group B salmonellae: homology with galactose epimerase
JOURNAL J. Bacteriol. 171 (10), 5687-5693 (1989)
PUBMED 2793832
REFERENCE 2 (bases 1 to 22080)
AUTHORS Jiang,X.M., Neal,B., Santiago,F., Lee,S.J., Romana,L.K. and Reeves,P.R.
TITLE Structure and sequence of the rfb (O antigen) gene cluster of Salmonella serovar typhimurium (strain LT2)
JOURNAL Mol. Microbiol. 5 (3), 695-713 (1991)
PUBMED 1710759
REFERENCE 3 (bases 1 to 22080)
AUTHORS Reeves,P.
TITLE Evolution of Salmonella O antigen variation by interspecific gene transfer on a large scale
JOURNAL Trends Genet. 9 (1), 17-22 (1993)

  TITLE     Direct Submission
  JOURNAL   Submitted (29-MAR-2001) Genome Sequencing Center, Department of
            Genetics, Washington University School of Medicine, 4444 Forest
            Park Boulevard, St. Louis, MO 63108, USA
COMMENT     Supported by NIH grant 5U 01 AI43283

            Coding sequences below are predicted from manually evaluated
            computer analysis, using similarity information and the programs;
            GLIMMER; http://www.tigr.org/softlab/glimmer/glimmer.html and
            GeneMark; http://opal.biology.gatech.edu/GeneMark/

            EC numbers were kindly provided by Junko Yabuzaki and the Kyoto
            Encyclopedia of Genes and Genomes; http://www.genome.ad.jp/kegg/,
            and Pedro Romero and Peter Karp at EcoCyc;
            http://ecocyc.PangeaSystems.com/ecocyc/

            The analyses of ribosome binding sites and promoter binding sites
            were kindly provided by Heladia Salgado, Julio Collado-Vides and
            ReguonDB;
            http://kinich.cifn.unam.mx:8850/db/regulondb_intro.frameset

            This sequence was finished as follows unless otherwise noted: all
            regions were double stranded, sequenced with an alternate
            chemistries or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by sequence
            from more than one m13 subclone.

PT   Nucleic acid molecules specific for bacterial polysaccharide antigens -
PT   useful for detecting specific strains in, e.g. food, faeces or patient
PT   samples.
XX
PS   Claim 9; Fig 10; 165pp; English.
XX
CC   This is the nucleotide sequence of a gene cluster involved in the
CC   biosynthesis of the Salmonella enterica serotype B (strain LT2) O
CC   antigen. 16 Open reading frames within the gene cluster were identified
CC   on the basis of homology to known sequences. The genes encode proteins
CC   (see AAW88335-50) involved the synthesis of sugars present in the
CC   polysaccharide antigen, and in the transport or processing of
CC   polysaccharide or oligosaccharide units. The use of nucleic acid
CC   molecules derived from assembly and transport genes, particularly wbd
CC   (transferase), wzx (flippase) and wzy (polymerase) genes, within O
CC   antigen gene clusters improves the specificity of methods for the
CC   detection and identification of O antigens, e.g. in testing food- or
CC   faecal-derived samples, or samples from patients. The O antigen is a
CC   major virulence factor of S. enterica

CC   The present invention provides a number of human immune system associated
CC   genes which are modified by the methylation of cytosines. The sequences
CC   can be used in the diagnosis and treatment of immune system disorders,
CC   including eye diseases such as retinopathy, neovascular glaucoma and
CC   macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid
CC   leukaemia, Alzheimer's disease, AIDS, epilepsy, neurofibromatosis,
CC   rheumatoid arthritis, psoriasis and inflammatory/ulcerative bowel
CC   diseases. The present sequence is a gene of the invention

PT   New nucleic acid derived from genes associated with DNA repair, useful
PT   for diagnosis, e.g. of ataxia telangiectasia, by determination of
PT   cytosine methylation.
XX
PS   Claim 1; SEQ ID NO 127; 25pp + Sequence Listing; English.
XX
CC   The invention relates to nucleic acids containing a sequence of at least
CC   18 nucleotides of chemically treated DNA of genes associated with DNA
CC   repair, and their complements. The invention also relates to nucleic
CC   acids comprising at least 18 base pairs of the chemically pretreated DNA
CC   of genes associated with DNA repair selected from PMS2L1, PMS2L12,
CC   PMS2L2, PMS2L3, PMS2, L4, PMS2L5, PMS2L6, MGMT, MSH2, NUDT1, TDG, INPPL1,
CC   RFC4, DDIT1L, FANCB, or XRCC8. Nucleic acids of the invention and related
CC   oligomers, are useful for diagnosis of diseases associated with gene
CC   repair, specifically ataxia telangiectasia, aging, Bloom's syndrome,
CC   Cockayne syndrome, Nijmegen breakage syndrome or Werner syndrome,
CC   immunodeficiency, trichthiodystrophy, Fanconi's anaemia, solid tumours
```

CC and cancer, particularly by determining status of cytosine methylation
CC and/or by detecting single-nucleotide polymorphisms. Determination of
CC individual methylation patterns may allow development of individualised
CC therapies. The sequences given in records ABL92192-ABL92335 represent
CC chemically pre-treated DNA fragments from genes associated with DNA
CC repair, and their complements. Note: The sequence data for this patent is
CC not represented in the specification, but is based on sequence
CC information supplied by the European Patent Office

PT New isolated cancer-associated polynucleotides and polypeptides useful
PT for diagnosing, preventing or treating cancers, especially lymphoma and
PT leukemia, or in screening for agents that modulate cancer.
XX
PS claim 16; seqid 754; 310pp; English.
XX
CC The invention relates to an isolated nucleic acid comprising at least 10
CC contiguous nucleotides of any of the 233 polynucleotide sequences given
CC in the specification, or its complement. The nucleic acids encode cancer-
CC associated proteins. Also included are an expression vector comprising
CC the isolated nucleic acid cited above, a host cell comprising the above
CC recombinant nucleic acid or expression vector, a microarray for detecting
CC a cancer-associated (CA) nucleic acid comprising at least one probe
CC comprising at least 10 contiguous nucleotides of any of the above-
CC mentioned nucleotide sequences, an isolated polypeptide (encoded within
CC an open reading frame of a CA sequence selected from any of the 95
CC polynucleotide sequences as mentioned in the specification, or its
CC complement), an isolated antibody, (or its antigen binding fragment) that
CC binds to the above polypeptide, a hybridoma that produces the above
CC monoclonal antibody, a pharmaceutical composition comprising the above
CC antibody and a pharmaceutical excipient, a kit for detecting cancer
CC cells(comprising the antibody cited above, methods for diagnosing cancer
CC or for detecting the presence or absence of cancer cells in an
CC individual, a method for inhibiting growth of cancer cells in an
CC individual, a method for delivering a therapeutic agent to cancer cells
CC in an individual, an electronic library comprising the above
CC polynucleotide or polypeptide (or their fragments), methods of screening
CC for anticancer activity or for a bioactive agent capable of modulating
CC the activity of a CA protein (CAP), methods for detecting cancer
CC associated with expression of a polypeptide in a test cell sample, a
CC method for treating cancers and a method for inhibiting the expression of
CC CA gene in a cell. The composition and methods are useful for detecting,
CC diagnosing, preventing and treating cancers, especially lymphoma and
CC leukaemia. These may also be used in screening for agents that modulate
CC cancer. The present sequence is a human CAP genomic sequence. Note: The
CC sequence data for this patent did not form part of the printed
CC specification, but was obtained in electronic format directly from WIPO
CC at ftp.wipo.int/pub/published_pct_sequences

PT New antisense nucleic acids, useful for identifying proteins or screening
PT for homologous nucleic acids required for cellular proliferation to
PT isolate candidate molecules for rational drug discovery programs.
XX
PS Claim 14; SEQ ID NO 27240; 1766pp; English.
XX
CC The invention relates to an isolated nucleic acid comprising any one of
CC the 6213 antisense sequences given in the specification where expression
CC of the nucleic acid inhibits proliferation of a cell. Also included are:
CC (1) a vector comprising a promoter operably linked to the nucleic acid
CC encoding a polypeptide whose expression is inhibited by the antisense
CC nucleic acid; (2) a host cell containing the vector; (3) an isolated
CC polypeptide or its fragment whose expression is inhibited by the
CC antisense nucleic acid; (4) an antibody capable of specifically binding
CC the polypeptide;(5) producing the polypeptide; (6) inhibiting cellular
CC proliferation or the activity of a gene in an operon required for
CC proliferation; (7) identifying a compound that influences the activity of
CC the gene product or that has an activity against a biological pathway
CC required for proliferation, or that inhibits cellular proliferation; (8)
CC identifying a gene required for cellular proliferation or the biological
CC pathway in which a proliferation-required gene or its gene product lies
CC or a gene on which the test compound that inhibits proliferation of an
CC organism acts; (9) manufacturing an antibiotic; (10) profiling a
CC compound's activity; (11) a culture comprising strains in which the gene
CC product is overexpressed or underexpressed; (12) determining the extent
CC to which each of the strains is present in a culture or collection of
CC strains; or (13) identifying the target of a compound that inhibits the
CC proliferation of an organism. The antisense nucleic acids are useful for
CC identifying proteins or screening for homologous nucleic acids required
CC for cellular proliferation to isolate candidate molecules for rational
CC drug discovery programs, or for screening homologous nucleic acids
CC required for proliferation in cells other than S. aureus, S. typhimurium,
CC K. pneumoniae or P. aeruginosa. The present sequence is one of the target
CC prokaryotic essential genes. Note: The sequence data for this patent did
CC not form part of the printed specification, but was obtained in
CC electronic format directly from WIPO at
CC ftp.wipo.int/pub/published_pct_sequences

PT New basic genetic operating system for autonomous prototrophic or
PT auxotrophic nanomachine, useful for therapeutic, diagnostic or industrial
PT purposes, comprises a nanomachine genome encoding a gene set for
PT viability or replication.
XX
PS Example 1; Page 247-248; 250pp; English.
XX
CC The present invention describes a basic genetic operating system for an
CC autonomous prototrophic or auxotrophic nanomachine comprising a
CC nanomachine genome encoding a minimal gene set sufficient for viability
CC or replication, optionally in the presence of an auxotrophic molecule.
CC Also described is an autonomous prototrophic or auxotrophic nanomachine
CC comprising a basic genetic operating system for autonomous prototrophic
CC or auxotrophic viability or replication, optionally in the presence of an
CC auxotrophic molecule, and a particle envelope. The nanomachines can be
CC used in gene therapy. The basic genetic operating system or nanomachine
CC is useful in therapeutic, diagnostic and industrial applications, e.g. as
CC a bioreactor, for bioremediation, for the production of a therapeutic
CC biomolecule or as a therapeutic reagent, for the production of a
CC diagnostic indicator or reagent, as a delivery system, as an artificial
CC tissue or organ system, as an energy conversion system, as a processing
CC system, as an anabolic or catabolic system, for the production of
CC biological films or coatings, and for cosmetic applications. The present
CC sequence represents a Mycoplasma genitalium gene cassette nucleotide
CC sequence, which is used in an example from the present invention for the
CC design and synthesis of a basic genetic operation system for a
CC replication competent nanomachine

PT Basic genetic operating system for autonomous prototrophic nanomachine,
PT comprises nanomachine genome encoding minimal gene set sufficient for
PT viability.
XX
PS Example 1; SEQ ID NO 17; 170pp; English.
XX
CC The present invention provides a basic genetic operating system for an
CC autonomous prototrophic nanomachine comprises a nanomachine genome
CC encoding a minimal gene set sufficient for viability. The present
CC sequence is Mycoplasma genitalium functional gene fragment. This sequence
CC is used in the exemplification of the invention.

PT   Preparing phagocytes which have taken up a foreign microorganism, useful
PT   for comprises contacting the phagocytes with the microorganism then
PT   isolating the phagocytes.
XX
PS   Example 7; Page 130-132; 155pp; Japanese.
XX
CC   The specification describes a method of preparing phagocytes which have
CC   taken up a foreign microorganism. the method comprises contacting the
CC   phagocytes with the microorganism before isolating the phagocytes. The
CC   method is useful for in vitro evaluation of function of phagocytes or
CC   microbicidal ability, and also for evaluating immune function and
CC   differentiation efficiency of phagocytes, screening modulators of
CC   phagocytic function, in management of clinical examination and as
CC   indication in infection diagnosis including infection state by foreign
CC   microorganisms like bacteria causing septicemia and by fungi. The present
CC   sequence is used in the course of the invention

PT   Detection of specific microbial DNA from treated phagocytes comprises
PT   probe hybridisation for identification of infection-causing microbes in
PT   clinical samples.
XX
PS   Example 7; Page 105-107; 129pp; Japanese.
XX
CC   The invention comprises a method for identifying microbes causing
CC   infection in clinical specimens. The method involves: isolating and
CC   immobilising phagocytes from the clinical specimens; the phagocytes are
CC   then treated to enhance their membrane permeability with lysostaphin,
CC   lysozyme, N-acetylmuramidase or zymolase; the exposed DNA is then
CC   hybridised with a DNA probe. The method of the invention is useful for
CC   the identification of the microbial type causing infection and blood
CC   poisoning (e.g. septicaemia). The present DNA sequence represents a
CC   microbial nucleotide sequence used in an example of the invention

PT   New isolated Enterococcus faecalis polynucleotides and polypeptides -
PT   used to develop products for the detection of Enterococcus and for use in
PT   vaccines for prevention or attenuation of Enterococcus infection.
XX
PS   Claim 1; Page 1673-1675; 2084pp; English.
XX
CC   A computer readable medium has been developed which has recorded on it
CC   982 nucleotide sequences isolated from the Enterococcus faecalis genome.
CC   AAX12938 to AAX13919 represent these nucleotide sequences which are
CC   primary nucleotide sequences, also known as contigs. The computer-based
CC   system can identify fragments of the Enterococcus faecalis genome with
CC   commercial importance. The products can be used to detect the presence of
```

```
CC   Enterococcus faecalis in samples. They can also be used for diagnosing
CC   Enterococcal infection in an animal and monitoring progression of
CC   disease, and for identifying agents which can be used to modulate the
CC   growth or pathogenicity of Enterococcus faecalis, or another related
CC   organism, in vivo or in vitro. In particular the polypeptides encoded by
CC   the Enterococcus faecalis nucleotide sequences can be used in vaccines to
CC   prevent or attenuate an Enterococcal infection

PT   Computer readable medium having recorded on it a Enterococcus faecalis
PT   nucleotide sequence useful for detecting diseases related to Enterococcus
PT   infections in animals.
XX
PS   Claim 1; Page; 119pp; English.
XX
CC   The present invention relates to a new computer readable medium with an
CC   Enterococcus faecalis nucleotide sequence. The invention is useful to
CC   diagnose the presence of E.faecalis in a sample or determining the
CC   presence of a specific microbe in a sample. The invention is also useful
CC   for modulating the growth or pathogenicity of E.faecalis, in a vaccine to
CC   confer resistance to Enterococcal infection, for commercial, therapeutic
CC   and industrial purposes, and for fermenting a particular sugar source or
CC   to produce a particular metabolite. The invention is useful for detecting
CC   diseases related to Enterococcus infections in animals, and for detecting
CC   E.faecalis using biochip technology. The present nucleic acid sequence
CC   represents an Enterococcus faecalis contig DNA sequence of the invention.
CC   Note: The sequence data for this patent did not form part of the printed
CC   specification but was obtained in electronic format directly from USPTO
CC   at http.sequdata.uspto.gov

PT   New nucleic acid comprising a sequence encoding an Enterococcus fecalis
PT   polypeptide, useful for preparing a composition for diagnosing or
PT   treating E. fecalis infection.
XX
PS   Disclosure; SEQ ID NO 812; 193pp; English.
XX
CC   The invention relates to Enterococcus faecalis polynucleotides and
CC   polypeptides. The invention also relates to a recombinant expression
CC   vector comprising a polynucleotide operably linked to a transcription
CC   regulatory element, a cell comprising a recombinant vector, a method for
CC   producing an E. faecalis polypeptide, an isolated nucleic acid comprising
CC   a sequence not given in the specification, a recombinant vector
CC   comprising the nucleic acid and a cell comprising the recombinant vector.
CC   The polynucleotides can be used to detect the presence of E. faecalis in
```

CC a sample. The sequences are useful for preparing a composition for
CC diagnosing or treating Enterococcus faecalis infection. This sequence
CC represents an E. faecalis polynucleotide of the invention.

COMMENT Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; cn bw sp, the same strain used for the BDGP's P1 and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

COMMENT     Determination of this BAC-end sequence was carried out as part of a
            collaboration with the Berkeley Drosophila Genome Project (BDGP).
            The BDGP is constructing a physical map of the Drosophila
            melanogaster genome using these BACs. For further information
            please see  http://www.fruitfly.org The BDGP Drosophila
            melanogaster BAC library was prepared by Kazutoyo Osoegawa and
            Aaron Mammoser in Pieter de Jong's laboratory in the Department of
            Cancer Genetics at the Roswell Park Cancer Institute in Buffalo,
            NY. The library is named RPCI-98 and was constructed by partial
            EcoRI digestion of Drosophila DNA provided by the BDGP from the
            isogenic strain y2; cn bw sp, the same strain used for the BDGP's
            P1 and EST libraries. A more detailed description of the library
            and how to order individual BAC clones, the entire library, or
            filters for hybridization from the BACPAC Resource Center can be
            found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

                     /note="Vector: pBluescript SK(+) vector DNA, phagemid
                     excised from lambda ZAP; Site_1: EcoRV; Site_2: EcoRV;
                     Genomic DNA was prepared from asynchronous blood stage
                     forms of the  cloned ANKA isolate of P. berghei grown in
                     laboratory Swiss white mice.  The DNA was purified from
                     contaminating host DNA by Hoechst Dye  33258-CsCl
                     ultracentrifugation and precipitated. Purified DNA was
                     digested with mung bean nuclease in the presence of 36-38%
                     formamide  at 50 C, as described (Vernick, K.D., Imberski,
                     R.B., and McCutchan, T.F.  1988. Nucleic Acids Research
                     16:6883-6896). The ends of the digestion  fragments were
                     polished using T4 DNA polymerase, and the fragments  size
                     selected in the range 500-2000 bp. These were ligated into
                     the  EcoRV-cleaved and dephosphorylated pBluescript SK(+)
                     vector.  Recombinant plasmids were used to transform E.
                     coli XL10-Gold host cells. "

COMMENT Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; cn bw sp, the same strain used for the BDGP's P1 and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

US-09-806-708B-22
; Sequence 22, Application US/09806708B
; Patent No. 6784342
; GENERAL INFORMATION:
; APPLICANT: The University of British Columbia
; TITLE OF INVENTION: Regulation of Embryonic Transcription in Plants
; FILE REFERENCE: 4810-58741
; CURRENT APPLICATION NUMBER: US/09/806,708B
; CURRENT FILING DATE: 2001-04-03
; PRIOR APPLICATION NUMBER: US 60/147,133
; PRIOR FILING DATE: 1999-08-04
; NUMBER OF SEQ ID NOS: 23
; SOFTWARE: PatentIn version 3.0
; SEQ ID NO 22
; LENGTH: 1141
; TYPE: DNA
; ORGANISM: Artificial sequence
; FEATURE:
; NAME/KEY: promoter
; LOCATION: (1)..(1141)
; OTHER INFORMATION: consensus sequence of A.t., L.a., and B.n. FAE1 promoters

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
